

Peeling and Splitting Machine PTSE-V2

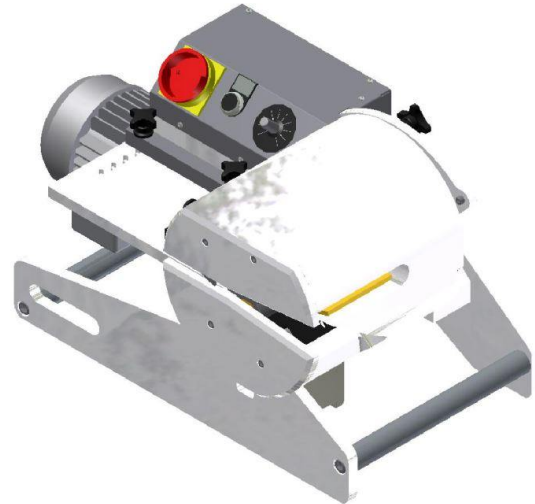

Portable assembly tool for peeling and splitting.

The PTSE-V2 eminently suitable for peeling and splitting of materials up to 8 mm material thickness.

Knurled rollers with large dimensions are tackling reliably the material and pressing it through the knife. The torsion-resistant knife fixation ensures additionally a better result. The material thickness can be adjusted steplessly with the use of the adjusting lever.

Due to the far forward lying blade a constant result is obtained – from the beginning to the end of the required point of cut surface.

Peeling and splitting knives are not included in the scope of delivery and have to be ordered separately!

Technical Data		PTSE-V2
Belt width max.	mm	unrestricted
Belt thickness max.	mm	8
Splitting depth max.	mm	120
Length	mm	650
Width	mm	340
Height	mm	350
Weight (net)	kg	64,0
Voltage	V	230
Capacity	W	370
Frequency	Hz	50 (60)

Material number	Designation
